Demo

```
1  ssh -oBatchMode=no shane@124.197.60.232 -p 9922
```

Text Generator

Background knowledge

- GPT-3 is a seq2seq model (a text generator)
 - It's stochastic but can be configured to be deterministic.

Key concepts

- prompt,
- completion, and
- tokens

Limitations

Combined, the text prompt and generated completion must be below 2048 tokens (roughly ~1500 words).

context-stuffing With only 2048 tokens, you need to make use of your real estate by providing instructions and making implicit information explicit.

Characteristics

- declarative, like `html`
- stochastic, like `problog`
- Unlocks new types of applications
- Speeds up development

Prompt YAML format Part 1

meeting-bullets-to-summary.prompt

```
1  title: "meeting bullet points to summary"
2  prompt: |+
3      Convert my short hand into a first-hand
4      account of the meeting:
5
6      <1>
7
8      Summary:
9  engine: "davinci-instruct-beta"
10 temperature: 0.7
11 max-tokens: 60
```

Prompt YAML format Part 2

meeting-bullets-to-summary.prompt

```
1 top-p: 1
2 frequency-penalty: 0.0
3 presence-penalty: 0.0
4 best-of: 1
5 stop-sequences:
6 - "\n\n"
7 conversation-mode: no
8 stitch-max: 0
```

stitch-max Keep stitching together until reaching this limit. This allows a full response for answers which may need $n \times \text{max-tokens}$ to reach the stop-sequence.

meeting-bullets-to-summary.prompt

```
1  vars:
2  - "notes"
3  examples:
4  - |+
5      Tom: Profits up 50%
6      Jane: New servers are online
7      Kjell: Need more time to fix software
8      Jane: Happy to help
9      Parkman: Beta testing almost done
```

Some prompts I've made

generate-vim-command.prompt

```
1 Vim
2
3 Insert "Q: " at the start of the line
4 :%s/^/Q: /g.
5 ###
6 Remove whitespace from the start of each line
7 :%s/^\s*/\1/g
8 ###
9 Join each line with the next line
10 :1,$j
11 ###
12 Make all occurrences of Steve lowercase
13 :%s/Steve/steve/g
14 ###
15 <1>
```

Prompts as functions

```
pen-generate-prompt-functions
```

Generate prompt functions for the files in the prompts directory
Function names are prefixed with pen-pf- for easy searching.
<http://github.com/semiosis/prompts>

exemplary: examples as functions

An example-oriented DSL that can be used to construct and compose NLP tasks.

Why is a DSL needed for this? Just to make the code a little more terse.

Regex

<https://github.com/pemistahl/grex>

```
1 (def regex
2   "example 1\nexample2" "^example [12]$"
3   "example 2\nexample3" "^example [23]$"
4   "pi4\npi5" "^pi[45]$")
```

exemplary: examples as functions

Analogy

```
1 (def analogy
2   ;; Each line is a training example.
3   "NNs" "NNs are like genetic algorithms in
4   that both are systems that learn from
5   experience"
6   "Social media" "Social media is like a
7   market in that both are systems that
8   coordinate the actions of many
9   individuals.")
10
11 (def field
12   "chemistry" "study of chemicals"
13   "biology" "study of living things")
```

Create a prompt

Ask the audience

- What type of text to generate
 - Could be code, prose, etc.

Ruby

```
