Demo

```
1  ssh -oBatchMode=no shane@124.197.60.232 -p 9922
```

Text Generator

Background knowledge

- GPT-3 is a seq2seq model A text generator.
  - It's stochastic but configurable to be deterministic.

Key concepts

- prompt,
- completion, and
- tokens

Limitations

Combined, the text prompt and generated completion must be below 2048 tokens (roughly ~1500 words).

```
1   context-stuffing
2       [#prompt engineering]
3
```

- declarative
  - Like html
- stochastic
  - Like problog
- Unlocks new types of applications

"Probabilistic and information theoretic methods are used to make results better anyway. Compromises are made anyway. Query reformulation, drift, etc. So it is just a natural progression to use NNs for some of these components? Am I right." – A quote from myself.
